I have double checked that the two wall sockets are still in the same position before connecting the power adapter. However, upon testing the power supply, I discovered that it did not work on my MacBook Pro, but it worked on my iPhone. I am aware that I need to remove the power cable from the wall socket on my MacBook Pro in order to connect it to my iPhone. I've tried to remove the power cable by using a paper clip, but it was impossible. How can I remove the power cable from the wall socket and connect the power cable to the wall socket?
