Photomaniac FrameTool PC/Windows

A tool for the high quality framing of your photographs. Easy to use, it creates ready-to-print JPEG images or CD/DVD covers, with the image displayed as a frame, and with a copyright note.

Anchor/Alignment: The images can be aligned and positioned at the bottom of the frames using the following simple anchor points: Top Left, Top Right, Bottom Left, Bottom Right. Alternatively, the

tool enables manual alignment for an easy choice. Title and Copyright Notes: The application allows you to add a title and/or copyright note on the image file. The added text can be vertical, horizontal, or scaled to fit in the frame, and can be centered to the image. Image Size: The tool allows you to use rectangular, round, or variable frame dimensions for each image. The frame dimensions can be set from the Image Properties dialog, so that all frames are the same size. Frame Background Color: You can set the frame background color to any of the supported colors, with and without transparency. Image Collage: You can create a collage of multiple image files, where the images are displayed as frames.

All frames can be of the same size, centered, and position can be set with two simple anchor points: Top Left and Bottom Right. You can also add frames by using the drag-and-drop function. The individual images can be clipped to a selected area (using the rectangle tool) to fit the frame exactly. The images can be moved around and scaled. You can also crop the images to restrict their size. You can save the frames as single images, i.e. ready-to-print (JPEG). You can also save the frames as collage files, i.e. ready-to-print (TIFF).

Individual Frames: You can edit the image displayed in the frames individually, such as adjusting color/brightness/contrast, or positioning/scaling. The chosen

image will be displayed as a frame on the ready-to-print JPEG image. Image Properties: You can change the resolution of the images in the frames (Scaling), color and brightness of the images in the frames (Brightness and Contrast), and scaling of the title and copyright (Title and Copyright). You can also set the frame background color and transparency (alpha channel). Image Selection: You can open several image files in a single frame. Selections can be
