## What's New in the?

VGMTool is a software for playing and editing VGM music. VGMTool supports VGM files up to version 1.1, it does not handle YM2612 and YM2151 data trimming very well (but you can get success by careful trimming), and its YM2413 optimiser is not 100%. Apart from that, it can do everything you might want to do with VGM files and is required in order to produce well-made VGM packs. Requirements: VGMTool is not supported on a 64bit Windows platform, but is also not designed to be used on one. For 64bit compatibility, you need to use the 32bit version of VGMTool with the 32bit libraries. For older versions of VGMTool, 32bit compatibility for 64bit Windows is not supported and not necessary. VGMTool (64bit) VGMTool (32bit) Usage After downloading VGMTool, you can start using it in 2 ways: In the GUI, VGMTool (or VGMFinder if you use the GUI version) will be opened. (or if you use the GUI version) will be opened. In the command line, the VGMTool application is started in another console window. In the following section, I describe both uses of VGMTool. VGMTool GUI When the GUI is opened, the first tab of the Toolbar is the Edit tab. By default, the Toolbar will be set to German localization. If you select a different localization, the Toolbar will be set to that language. If you start the application, you will get the splash screen. If you press the play button in the toolbar, the VGMTool GUI will show up. You can change the localization here to another language than your windows system language. To start playing a VGM, you must

select an Audio Track from the Audio menu. Click the Options menu and select the Audio Settings dialog. You can select the Audio sample rate and the Audio sample size. In the lower part of the dialog, you can adjust the Audio track volume and the Audio track bass. To adjust the volume, use the slider at the bottom of the dialog. The maximum volume value is 100% and a value of 0% will mute the volume. To adjust the audio bass, use the slider at the left side of the dialog. The default value is 50 Hz, but the bass range is adjustable by the slider. You can scroll down to get to the Audio Track Settings dialog. There is only one Audio Track
