When I click the RGB icon (3), it's all there. With a one-click Quick Fix, I can use a new, smart color filter to pull in and correct missing colors. On the right side of the window, you'll see the RGB value that I select (4). If it doesn't come up right, I can use the color preset and as you can see, it's already selected. Speaking of colors, the new feature is a real game changer for mixing colors. With the gradient tool (5), I can make a smooth transition between two colors. It's a simple, one-step tool that even makes it easy to mix a color palette (6). If you need to change the colors in a design, you can now take advantage of a new color insertion tool (7). The following video shows how to approach a new interface with an established workflow already in place. It includes ideas on how to leverage existing processes and practices more efficiently when you get up to speed with the new features. While you learn the new tools, you can keep the old ones too, if you need to.
