- The ability to store multiple layers into a single Smart Object
- Performance is in the ballpark of other RAW editors (Lightroom, Halide, the DPPs, etc.). Lightroom 6.0 is the first real newcomer in several years, for example, and the performance is fairly good.

There is an "empty photo module" visible for a few seconds when launching. This is just an empty module with the existing settings and is not "smart". Secondly, the editor lacks some desired functionality. For example, editing completed images isn't up to scratch. In the workflows I tried earlier, there wasn't a dedicated option to edit all frames. Edits should be applied to all frames, not just one. I find this to be annoying because right now, if the user makes some changes in the Raw Editor, they are interpreted in Luminance format, and only applied on a per-file basis in the Frame Editor. Then the user only sees certain corrections in the Frame Editor - not the same in all frames. Also, exporting still needs to be done one frame at a time in the Frame Editor. Often, after saving the file, you end up with many duplicates - one in the "camera" folder, one in the project folder, etc. This is a tricky workflow to keep track of. I'm excited to see that Adobe is working on putting together a way to export a completed image out in one go. This should improve export times dramatically for many users.

Lastly, you can't use the Finesse plug-ins after opening the Raw Editor. This is a real pain. Many PC users use the plug-ins as part of their workflow, and this isn't possible at present.

These are pretty minor gripes, and made it hard for me to truly like the editor, which is a shame. I was hopeful that maybe, with some focus, they could make the user interface more discoverable, and more configurable.

This is a clever tip and trick that I hope will save you a lot of time and frustration: you can use the Properties panel to tell Photoshop to replace a color with another one. For instance, if you want to make a specific element in your image match the background, you can use the Gradient and Properties panels to make that happen. **What It Does:** The Clone Stamp tool lets you selectively "stamp" out unwanted portions or copies of objects or images. You can use it to remove dust or other unwanted objects from a photo. e3d0a04c9c
