So you upgraded and have a few problems with the new version; stop worrying, they are Troubleshooting a known issue to resolve. Just to clarify: you can now share images for review using the New share view in Photoshop, and not only is it possible to do this using a share from the URL, but it is also possible to do this via a QR code, which allows you to assemble a gallery quite easily using the app

I am a photographer and have been using Photoshop for years. I also just purchased the Lightroom app for Mac. The downside with Photoshop is that it is a very awkward app to navigate when you add a lot of layers and it is very slow to render. Initially, I was happy with the incremental update to Lightroom. Lightroom now does what I wanted it to do and I got the tools I needed to edit and organize digital images from shoot to my library. However, I am now forced to use Lightroom & Photoshop due to the release of Adobe Creative Cloud, which includes access to Photoshop CC (formerly known as Photoshop CC Extended). The integration is wonderful. You can now create a light room catalog and organize folders for any of your files on just about any device. Data is constantly mirrored from your computer to Adobe's "cloud." You can now easily share files for review in Photoshop with the new Adobe Share for Review option. Not only is it possible to do so, but it is also possible to do so via a QR code, which allows you to assemble a gallery quite easily using the app. If you aren't familiar with QR codes, here's a quick primer: They're basically a type of bar code that can be scanned by smartphones.

What should you know before using Adobe Photoshop?

Before you become comfortable with Photoshop, you should know a few things. Make sure to save your images before you make any changes. And be aware that if you are working on the background of a page, that it will not be touched if the image is in a photo format. You will have to find a way to make sure that you do not lose everything if you use layers properly. You can save your project as a JPEG, TIFF, or PSD document in which you can retain the ease that your layers make.

What tradeoffs are you willing to accept?

It is very important to understand your needs and tradeoffs when working with the software. If you do not like the look of an effect when you are using a particular tool, you can always press Ctrl+Z and revert to the things you had in your original image. You can also go back to the original version of the file if it's not a finished project.
